

Comment from Jennifer Wood

I do not want to have or pay for connected vehicles and their required infrastructure. The only acceptable radio in cars are the ones that can be easily turned off or removed. Technology is not better than human drivers. Computers crash too! Furthermore, a substantial body of evidence (over 10,000 science studies and possibly tens of thousands of studies) clearly show that radiation from Microwave/ RF (wireless) radiation is harmful to health. and instrumental in many serious diseases. It also has been shown to impact cognitive function so wireless RF sensors that are meant to prevent accidents might cause as many accidents as they create. Millions of people world wide now suffer from Microwave Sickness and other illnesses linked to RF radiation who will experience serious impairment if radio frequency systems in automobiles cannot be removed. Industry could also suffer substantial financial losses as well due to any defected systems that cannot be removed and so forth. This is not only a violation of human right to health; it is a violation of good business practices.
