

Comment from Mary Beth Brangan

I am horrified at the prospect of this totally unnecessary exposure to damaging radar radiation. Servicemen operating radar during WWII were sickened and permanently damaged. Studies showed infertility, cataracts, headaches, nausea, etc. Why haven't the thousands of independent credible peer reviewed studies showing damage to DNA and cellular function, not only in humans, but in all creatures, plants, trees, insects, birds, etc. from RF, been taken into account by the proponents of this idea?

Conservative estimates of people totally unable to tolerate exposure to man-made Radiofrequency radiation are from 3% of the population to 30% and rising. Everyone is affected by this. Effects are cumulative. This V2X technology should be banned.

I am totally opposed to this and I do not want to have or pay for connected vehicles and their required infrastructure. The only acceptable radio in cars are the ones that can be easily turned off or removed.

Technology is not better than human drivers. Computers crash too!
