

## Comment from Christine Calabrese

Please consider the security issues regarding this infrastructure. WIRELESS is easily hacked, so it stands that these cars could be told to hit each other, drive off a cliff, hit a pedestrian by a hacker miles if not satellites away. Do the research <https://www.wired.com/story/krack-wi-fi-wpa2-vulnerability/> just wifi is not secure and these V2V instruments are probably totally vulnerable.

Furthermore, the health impacts of more radiation albeit non-thermal, are presently showing many proofs of harm. The PRECAUTIONARY PRINCIPLE should therefore be first and foremost in your minds.
