

## Comment from Lynn Stull

I have no desire for this type of automation. I do not want to have or pay for connected vehicles and their required infrastructure. The only acceptable radio in cars are the ones that can be easily turned off or removed.

Technology is not better than human drivers. I object to the additional radiation that will be needed to power the V2X Communications network. Scientists and physicians all over the world have already documented the harm from wireless radiation to children, adults and the environment. In addition to the excess radiation, the energy cost to this type of infrastructure is not sustainable.

The wireless industry and those who will profit from this network overstate the benefits.

The science:
