

Comment from Andrew Krupp

I am writing in opposition of a mandate of V2X communications rather than it being an option for all vehicles. There are many people with medical conditions that are effected by RF and EMF exposures that would not be able to ride in or drive a vehicle with V2X communications. This would leave them without transportation which is essential. If V2X becomes mandate you will also need to mandate provisions for medical accommodations for those with a medical diagnosis which would require them to have access to vehicles without the V2X feature and thus the right to transportation.
