I own a 2008 Silverado 1500. Today I called my dealer Cable-Dahmer, Independence, Missouri. I was read GM's official position that while they have a fix for the 3500 truck, they do not have a fix for the 1500. Additionally, I was told GM has determined the 1500 is safe to drive. Hmm
Since July 2016, I have worried about me or my passengers, my grandchildren, being injured. Two years and nine months of worry.
The answer is money don't you think? GM doesn't want to pay to fix. Please nhtsa, make GM fix the Silverado 1500s. And while you are at it, make them fix all the Takara airbags.
