

Comment from John Eastman

I will not comply! This is Un-Constitutional on several aspects. The system will be used for revenue generation by enforcement entities. It will also be used for tracking and surveillance. This is a direct 4th amendment violation. Government is restrained by the Constitution and this would be unlawful.

The EMF radiation from a combination of sources is harmful to living things. The 5G highway will be one big microwave oven.

This all need to end.

NHTSA is an un-Constitutional agency and needs to be defunded. Vehicles are getting so expensive due to stupid and unnecessary regulations that most working people can no longer afford them. Airbags, antilock brakes and many standards have caused maintenance costs to increase as well. Stupid TPS systems are broken all the time and it is hundreds just to diagnose them. Now electric steering, what could possibly go wrong?

There is zero benefit to the American Public and this only furthers the Police State. Time to start removing government workers that propose such criminal ideas.

The government does not need to know my every movement. I own the roads that I have been paying for all my life. I will continue to use them without a transponder! Try messing with the public on this one and you are going to have a backlash like you have never seen. The only radio I need is the one that music comes out of and I can turn OFF!
