

## Comment from Stephanie Thomas

Dear NHTSA,

Thanks for your work which is to keep us safer in our cars and on the highway,

However, I and many others are greatly concerned about the action to possibly MandateV2V technology in all cars. This is a biological hazard to those in the cars and possibly people and the environment outside of the cars. There are many people who could not be in such a car. This is a disability rights issue. Some people need to bet in older cars w/ out even the tech;ogy that we have now because of injury from wireless.

Such a step needs to be proven safe before being considered. You are there to keep us safe not there to help industry expand.

I am short of time to say much more and a message said that I might have plug in that may make my comment not be recorded.

I will send a recommended link that has more information. I couldn't move it over, so I will type it.
