

Comment from Sylvia Machado

EMF's are harmful to humans, animals and the environment.

<https://articles.mercola.com/sites/articles/archive/2017/09/03/electromagnetic-fields-harmful-effects.aspx>

Exposure to microwave: EMFs, like cellphones, causes massive mitochondrial dysfunction due to damage done by free radicals from peroxynitrite that also cause single and double stranded breaks in your DNA.

Excessive free radicals triggered by low-frequency microwave exposure from cellphones and Wi-Fi networks have been linked to chronic diseases such as cardiac arrhythmias, anxiety, depression, autism, Alzheimers and infertility.

Excessive calcium signaling produced by EMF exposures also has important roles in producing pathophysiological effects of EMFs including each of the effects listed above.
